

Buffalo's LinkStation 520DN provides the perfect streaming solution for the family

Wouldn't it be great to have one device in your home where you could securely store all of your family's music, videos, movies and photos for easy access to that content from anywhere with an Internet connection? With Buffalo's LinkStation 520DN, you can easily store everyone's media files, and stream that content directly to your computer, phone or smart TV.

Whether you are just down the hall, across the city or traveling to another country, your digital life is just a few clicks away. You can set up your own secure private cloud with Buffalo's private cloud solution, so family and designated friends can access content from wherever they have a web connection. And since it's your own cloud, you don't have to pay fees to a third-party provider.

THE BUFFALO SOLUTION

Each family member can set up their own account on the LS520DN and they can access the content through Wi-Fi in the home or anywhere with a web connection. For example, Mom can store and view her family photos from the LS520DN, which frees up storage space on her laptop. Dad can listen to the high-energy playlists while working out at the gym. And both can secure selected content behind a password-protected account, away from prying eyes.

Their daughter can easily access all her photos and music streamed from the LinkStation. Their son can transfer his movies from his computer to the LinkStation so he and his friends can watch movies from a friend's house. Last but not least, Grandma can easily see all of the photos and videos from birthday parties, graduations and other family events.

The LS520 is designed to simplify and centralize your digital life. It's easy to manage with the intuitive, quick and responsive user interface. Now you can enjoy uninterrupted access to terabytes of storage at home or while traveling.

RESULTS AND NEXT STEPS

The LS520DN comes fully equipped and is ideal for storing and sharing your photos, videos, music and movie files. Key features and benefits include:

- Simple setup, right out of the box
- Equipped with a user-friendly interface that simplifies file management
- Buffalo's WebAccess service allows users to create a private cloud for easy remote access and file sharing over the Internet
- NovaStor backup software that provides server and workstation licensing
- Limited three-year warranty
- Friendly 24/7 US-based technical support
- Pre-populated with premium NAS-grade hard drives
- Designed with two drives for high performance, reliability and large capacity
